CHARACTERISTICS DEFINITIONS

Drainage	(Saturated hydraulic conductivity - Ksat) Measure the efficiency of the water flow through a substrate. The higher the conductivity is, the quicker the water reaches the roots.
Aeration	(Air Porosity - AP) Volume of air that the substrate contains after free drainage of the macropores.
Water Retention	(Easy Available Water - EAW) Volume of water retained by the mesopore (medium size pores). Plants may pick up that water without spending too much energy which is very productive.
Gas Diffusion	Speed of movement of the air. The higher the gas diffusion is, the faster the oxygen will reach the roots.
