

# BLACKMORE WATERALL CONVEYOR

The low pressure or high volume waterbars make the WaterAll ideal for seeding or planting lines

For years customers asked us to make a watering tunnel. We did them one better with the Blackmore WaterAll conveyor, a machine that made water tunnels obsolete and is now the standard in the industry

The unit's eight foot length (custom lengths available) makes it ideal for watering in trays behind your seeder (even at 1,000+ trays per hour on a Blackmore cylinder seeder), or using on your planting or potting line. The plastic web conveyor is designed for long life and to prevent buildup of material on its surface.

Blackmore's gentle water curtain design prevents seed displacement. No tunnel is needed to contain spray, so access to the five waterbars is unrestricted. Individual controls permit each water bar to be regulated as needed. An electric eye and delay timer turn the water on and off automatically. Simple garden hose connection.

**NOW WITH STAINLESS STEEL TUB**

## Specifications

Length\*: ..... 8 ft. (2.46m)

Width: ..... 2.5 ft. (76 cm)

Maximum tray width.....17 in (43 cm)

Power: ..... 120 VAC, 50/60 Hz

*\* Custom lengths available*

*(Prices, specifications subject to change without notice, crating and shipping extra)*
